EDUCATION

San Jose State University

Sept. 2019 - Present

- B.S. in Software Engineering; Senior standing; Graduating in summer 2021.

Diablo Valley College

Jan. 2017 - May 2019

- A.S. in Computer Science; Graduated with honors.

SKILLS

Languages: Dart, Swift, Go, Python, C#, C/C++, Java, JavaScript, TypeScript, Ruby

Frontend Frameworks: Flutter, SwiftUI, React, React Native, UIKit, .Net

Other Technologies: Core Data, CSS, Docker, HTML, HTTP, JSON, Kafka, SQL, SQLite, SVN, AWS, Google Firebase, Git, OAuth, TensorFlow Lite

EXPERIENCE

XOKind

Apr. 2021 - Present

Frontend Software Engineer

- Work closely with designers and backend software engineers to develop [Una](#), a mobile app made with Flutter that simplifies the trip planning with the help of machine learning.

Proofpoint, Inc.

May. 2020 - Present

Software Engineer Intern

- Implemented database migration scripts in Ruby, leading to a smooth upgrade of the system from Ruby on Rails 4.x to 5.x.
- Implemented a monitoring system in Go for detecting malfunctions of components, making it easy for engineers to detect and track down bugs.
- Implemented unit tests for services written in Go responsible for fetching data from various API, ensuring the system would function as expected.

PERSONAL PROJECTS

[Tasky](#) (Swift, iOS)

Jan. 2021 - Present

- Tasky is a task management app made with SwiftUI that allows users to manage their personal projects using Kanban method. Users can also invite others to collaborate on the project.
- Utilized Firebase for user account management and user-generated data storage.

[Manji](#) (Flutter/Dart, iOS & Android)

Mar. 2019 - Present

- Manji, made with Flutter, capable of running on both Android and iOS, is a Japanese Kanji dictionary application packed with features. Not only does it support basic functionalities like kanji stroke animation, customizable study list, on-demand generated quiz, user-generated data synchronization, it also has features such as handwritten kanji recognition, image kanji extraction, making learning Japanese kanji an easier experience.
- Implemented web scrapers using Python to extract and collect, from various websites, information such as pronunciations, meanings, common vocabulary and example sentences, for about three thousand kanji characters.
- Integrated TensorFlow Lite for handwritten kanji recognition.
- Integrated Google Cloud Vision API, enabling users to extract kanji characters from images.

[Animey](#) (React Native/JavaScript, iOS & Android)

Mar. 2019 - May 2019

- Animey is a mobile client written using React Native, for <https://kitsu.io>
- Utilized kitsu.io's REST API for fetching data of the website.

[Kanjirin](#) (C#, Windows)

Sept. 2017 - Apr. 2018

- Kanjirin is a Japanese Kanji dictionary application written in C# and designed for Windows.
- Utilized XAML for the user interface.
- Utilized SQLite for dictionary file and user-generated data storage.
- Implemented web scrapers using C# to fetch kanji data from various websites.
